

Oval front grip Grabber®

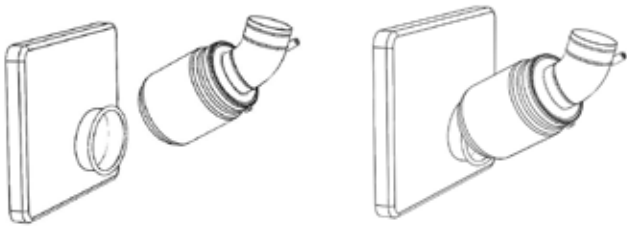

The Plymovent Oval front grip Grabber® is designed to connect to oval tailpipes with a minimal protrusion from the chassis. Due to several unique product features, as changed inflation points and a special clip the Grabber® functions as any other Grabber®.

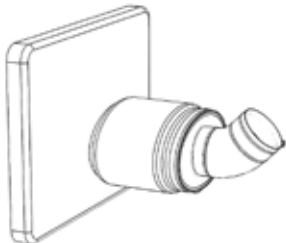

USE

For a proper connection it is important to connect the grabber in the following sequence:

1. Place the upper edge of the Grabber® on the upper end of the tailpipe.

2. Move the lower part of the Grabber® around the tailpipe. The clip will connect itself behind the flange of the tailpipe.

3. Inflate the Grabber® which locks the clip firmly behind the tailpipe flange.

4. The Grabber® disconnect is automatic, in line with a normal Grabber® nozzle.

APPLICATIONS

To be used for oval tailpipes with a protrusion from the chassis of +/- 42mm and with outside dimensions of +/- 155 x 207mm. The tailpipe will need to have a flange at the tip in order for the special Grabber® clip to connect.
